Event (Claim File) Data Conventions

Data Element Types

Symbol	Type	Comments
AN	String	Any character from basic or extended character set
В	Binary	
DT	Date	YYMMDD or CCYYMMDD depending on the length of the element
ID	Identifier	Value from a predefined table of codes
N#	Numeric	# = number of decimal places to right of implied decimal,
		(-) indicates negative number, length does not include optional sign
R	Decimal	Number with explicit decimal point always displayed,
		(-) indicates negative number, length does not include optional sign
TM	Time	HHMM(SSDD) depending on the length of the element
Χ	String	Specific code such as a record ID (IPOP definition)

Requirement Designators

Туре	Definition	Comments
М	Mandatory	Required field
0	Optional	Field may or may not be present. If NOT present, the Element Separator is still required
Χ	Relational	Codes in this field are based on the qualifying code in the previous field

Recommendations

- It is STRONGLY recommended, but not required, that an asterisk (*) be used as the Data / Field Element Separator, a colon (:) be used as the Component Element Separator, and a tilde (~) be used as the Segment / Record Terminator in the ISA record.
- It is recommended that all time fields always be set to 24 hour clock (2:00 pm is 1400) and use only 4 position length (HHMM). Do not use a colon (:) in the time field, especially if colon is being used as the Component Element Separator.
- Records should have CR/LF following the "~" at the end of the record. Not only does the software behave better with this line break, but it enables IPOP to read the raw data better and zero in on any problems.

Procedure

The Editor program (written in 2004) allows the HIPAA format to be submitted directly into the IPOP database.

NOTE:

- Only the HIPAA records that are needed for the Event Data Set are listed in this document (and some needed for ease in following loops and "envelopes"). Additional HIPAA records may be included in the same transmission, but IPOP will ignore them.
- An encryption program for the HIPAA format is available under File Management within your Data Upload System web page. Instructions for this and the other encryption programs is available in the same location.
- Highlighted items within the Input Record Format are fields that are being used by IPOP/DBHDID.

Input Record Format

Section: ISA – Interchange Control Header This record is a fixed length record of 106 bytes.

- NOTE: 106 bytes includes the Data / Field Element Separator (position #4), Component Element Separator (position #105), and the Segment / Record Terminator (position #106). These delimiter characters may NOT be used anywhere else in the entire transaction data set.
- It is STRONGLY recommended, but not required, that an asterisk (*) be used as the Data / Field Element
 Separator, a colon (:) be used as the Component Element Separator, and a tilde (~) be used as the Segment /
 Record Terminator. For consistency, these are the delimiters used in this guide.

Only once per submission: additional ISA records will be ignored

Also, some services may be performed at homes, schools, courts or other non-regional sites. A Provider Site ID may be established to help identify a specific service and the address used may be the 'home' address of the service or the staff member

providing the service. See Appendix A.

Required?: Yes

Error Action: 1. If Client Field 6 – Client Status Code = 1, Fatal, reject claim.

2. If Client Field 6 – Client Status Code = 2, General Error reported, code changed to

Valid Codes: Provider Number must be within the reporting Region. See Appendix A

If Provider Number corresponds to a Site Code that is not a CSU Site and if the *DMHMRS Modifier 1* value for the current record equals "038", "039" or "076", then a Possible Error will

be reported.
